

# MAMBA Case Brush

- Use the **MAMBA** brush to remove loose dirt and carbon from your cases. Clean cases will put less strain on your reloading equipment;
- The **MAMBA** brush works well in combination with **MAMBA** soap to get your cases thoroughly clean;
- The **MAMBA** brush has nylon hairs for durability and resilient flexibility. It yields enough when inserted into the case but is still hard enough to clean the case effectively inside and returns to its original shape after removal;
- The brush part is 120mm long and the point can be shortened by cutting it so as to remove worn front parts;
- The handle is also 120mm long with a large rear eye and fits well in your hand for a firm grip;
- Two brush types are available. The white hair brush is 13mm diameter suitable for calibres 0.308 and larger. The black hair brush is 10mm diameter and suitable for calibres .270 and smaller.
